DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of USPN 6,528,755 to Grewell et al and in view of USPN 5,408,572 to Kriege. AAPA discloses well known laser welding (Disclosure Figures 1 and 2, Disclosure Specification Background of the Invention), but does not describe instant claimed output light converging features. Grewell et al disclose known light guide means for controlling output light for laser welding. Kriege disclose (Figures 2 and 3) well known cone shaped light emitting units. The use of the well known cone shaped light emitting unit combined with the AAPA light guide would

have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because laser beam control is well known as described by Grewell et al and because the tapered unit output control is very well known in the art.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited art pertains to light transmission control.
